

# Spend More Time on Patient Care Today

The OneView electronic medical record (EMR)\* is an intuitive, simple platform for DaVita-credentialed providers to manage ESKD and AKI patient care and documentation. With OneView, you can:

- ✓ **Save time:** Fewer clicks to document patient encounters means you'll have more time to focus on patient care.
- ✓ **See what you need:** Viewing all patient information on one screen lets you work more efficiently.
- ✓ **Cut admin tasks:** Less administrative work lets you focus on your job: patient care.

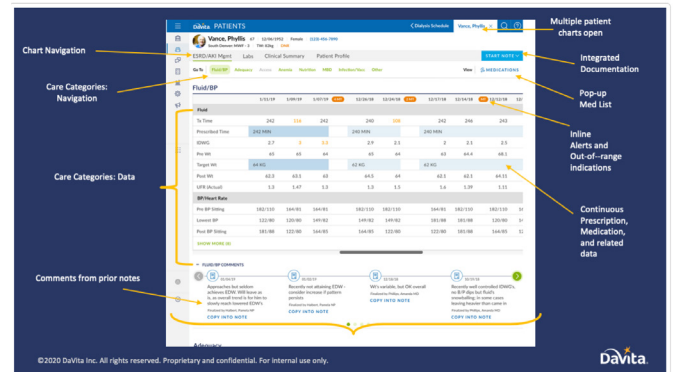

## OneView offers new features for managing patient care.

### Transition-of-Care Notes

Document all patient care changes after a discharge from another facility, best ensuring the safety of these complex patients.

### Documentation by Exception

Simply click "Reviewed" when labs are within normal range for a care category; only comment when there are issues. This saves time, reduces clicks and serves as the gateway to continuity of care—keeping patient issues at the forefront, focused and organized for the next provider.

Patient-data view

Search Patient's Name

**Transition of Care**

This note will allow you to document clinical activities performed for this patient due to a transition of care event occurring in the last 60 days. Only finalize the note once all activities have been completed.

**Hospitalization Dates**

Add Admit Date  
Select Date

Add Discharge Date  
Select Date

**Post Discharge Follow-up**

Date of 2 Day Follow-up

## Continuity of Care Information

Clinical data is organized by care categories for each patient, and prior note details are visible in a timeline history. This lets you see care categories that require follow up and helps you maintain care continuity between visits and over time.
